Past performance is not a reliable indicator of future performance. The value of investments and income derived from them can go down as well as up and you may get back less than originally invested.

If portfolios have short histories, performance and volatility data may not be shown. The performance figures shown may differ from the performance of the actual model itself due to the variation in timing of the initial and subsequent investments. Model performance is shown in sterling, net of underlying fund charges and an EQ management fee, but excludes platform and advice fees. Management fees included are 0.59% for Best Ideas, Positive Impact and Income portfolios and 0.39% for Low Cost portfolios. Underlying fund charges may vary depending on platform. All income reinvested; actual returns may vary. We benchmark our model portfolios against Asset Risk Consultants (ARC) Private Client Indices. All ARC benchmark figures are based on participating investment managers' actual performance data, net of fees, following the last quarter end. Data sources: ARC, EQ, Morningstar. While this performance data is believed to be correct, it cannot be guaranteed. No representation or warranty, expressed or implied, is given as to its accuracy or completeness.
